

Pet Barrier

A Revolution in Pet Containment

The Pet Barrier? is a unique self contained, retractable barrier designed to provide both a physical and psychological barrier for small to medium sized animals.

The Pet Barrier? not only installs with ease, it's streamlined, sleek appearance prevents it from being the eyesore many other bulky gates and kennels can become. It is reliable, adjustable and affordable. Not only will it work wonders on your front door, but you can use it on internal doorways, hallways and sliders too! The Pet Barrier is perfect for the much-loved, but energetic or protective family pet and ideal for the sneaky escape artists.

The barrier consists of two separate pieces; the housing unit which is installed on the door jamb and the receiving bar which is installed on the door. When engaged, the barrier automatically draws from within the housing unit as the door is opened providing a barrier across the expanse created by the opened door. The barrier material is a reinforced opaque vinyl that is puncture and tear resistant. The sleekly designed housing unit is un-obtrusive and bi-directionally mounts on the door jamb. It measures 33" in height and is approximately 2.5" in diameter. The second of the two pieces, the receiving bar, mounts just below the door handle of the door. Connecting the attachment bar on the housing unit with the receiving bar engages the barrier for use.

Actual barrier measures 30.5" H x 54" L (we do not recommend drawing the barrier farther than 48" L to allow for the give? necessary should your pet push up against it.)

Made in the USA
